## Highlights — October 2023

**GDP {Page 3}** was released late last week, and as expected, U.S. economic growth was very strong in Q3 of this year. If we annualize the growth in Q3, the U.S. economy would expand at 4.9% over the course of the year (hence “annualized”). Another way to look at quarterly data is to simply compare Q3 of this year to Q3 of last year, and that growth rate was 2.9%. I personally think that year-over-year analysis is more accurate than the annualized one. Just because one quarter has unusually high or low growth, that doesn’t mean that level of activity will hold for an entire year, which is what the annualized metric states. The year-over-year growth of 2.9% is still, however, above “trend” growth we’ve seen in the U.S. economy over the past many decades (roughly 2.0%).

In the previous quarter (2023 Q2), economic growth was more in line with “trend” growth at 2.1%. The outsized economic performance in the more recent quarter of Q3 was mostly due to relentless *increases* in consumer spending (up 4.0%), private inventory investment, exports, all levels of government spending and residential investment. It’s worth noting that the largest component of personal consumption expenditures was in the services category. Most experts say this summer/early fall bump was part of the last hurrah of consumers who are enjoying full normalcy after the pandemic, are confident about their employment, spending what’s left of their “excess” savings, and indeed relying more on credit cards to finance expenditures. There is a reality check around the corner with savings rates that continue to dwindle (now at 3.4% versus 7.2% in January 2020). Undoubtedly, a portion of the bump in use of credit cards is also due to significantly higher price levels that lower-income individuals, in particular, are struggling with. Lower income households report they are using credit card more so just to cover necessities, and that’s a bit of a red flag for me as I watch credit card delinquencies rise. Goods purchases did not increase as much as services, but still had a nice increase in Q3 after lackluster Q2 levels. Subtractions on GDP in Q3 included nonresidential investment and (more) imports.

Despite the robust GDP read, consumers, businesses and most economists remain skeptical about the U.S. ability to keep up with longer-term trend growth rates of ~2.0%. Remember that GDP is a backward-looking indicator with Q3 representing July to September so in order to speculate how the remainder of this year and next may look, we have to focus on leading indicators. If we do that, a list of headwinds remains. We have improving but still sticky **Inflation {Page 3}** that stayed at 3.7% in both August and September mostly due to shelter and gasoline costs. Because of that inflation, the Federal Reserve may raise **Interest Rates {Page 3}** one more time in November or at a minimum keep them higher for longer, which crimps homebuying and business investment. It’s somewhat technical, but the “real” interest rate is also a factor here because as inflation declines and interest rates stay high, the “real” interest rate is greater, and that disincentivizes borrowing and investing, which hurts future growth. The high “real” interest rate is part of the reason U.S. Treasuries (e.g., bills, notes, and bonds) have been more attractive to investors compared to stock market investments. This alongside general economic uncertainty translates to investor skittishness and stock market volatility as you can see in the chart.

At a household level, the dissipating pandemic savings, rising debt (with increasing credit card *and* auto loan delinquencies), lower government spending due to the (shutdown averting) Fiscal Responsibility Act, general legislative paralysis, and student loan re-payments also factor into what will likely be reduced consumer and government spending, which all factor heavily into GDP.

Having said all that, retail sales do continue to hold up and two contributing factors I have recently covered on Fox21 include many people holding **second jobs**, which help finance continued spending, and many households who still have decent discretionary income because they **locked in sub-3%, 30-year mortgage rates a couple of years ago**.

The narrative that the strong labor market will likely keep an economic slowdown or technical recession from being severe, has not changed. **Job Openings {Page 3}** had an upside surprise in the latest August data (9.6 million openings) and we also had a 336,000 increase in employment across a plethora of industries in September according to the **BLS report**. The increase in employment is more than double the pre-pandemic average and helps explain the national and local declines in **Unemployment {Page 3}** in September. The U.S. rate fell from 3.9% in August to 3.6% in September, and the Pueblo County rate fell from 4.9% to 4.3% over the same period. Another factor in the U.S. economic resilience this year is the simple fact that the U.S. dollar is the world’s reserve currency. This means the demand for U.S. Treasuries will remain relatively strong, which enables the U.S. to finance its expenditures as well as its (ever-growing) debt.

But the recent resilient position of the U.S. could be thrown into question by external factors. Serious geopolitical risks, more recently the Israeli-Palestinian crisis, the Ukrainian crisis, and other global challenges currently pose the largest threats to both global economic stability and inflation. Commodity prices for staples like oil and wheat are at particular risk. These and other exogenous risks could debunk the as-

2021 Mortality Rates due to Homicide per 100,000 Population				
Canada	Germany	Italy	Japan	United States
2.1	0.8	0.5	0.2	6.8

Source: UN Office on Drug and Crime's International Homicide Statistics database through The World Bank and World Population Review

Note: "Each year when Crime in the United States is published, some entities use reported figures to compile rankings of cities and counties. These rough rankings provide no insight into the numerous variables that mold crime in a particular town, city, county, state, or region. Consequently, they lead to simplistic and/or incomplete analyses that often create misleading perceptions adversely affecting communities and their residents. Valid assessments are possible only with careful study and analysis of the range of unique conditions affecting each local law enforcement jurisdiction. The data user is, therefore, cautioned against comparing statistical data of individual reporting units from cities, metropolitan areas, states, or colleges or universities solely on the basis of their population coverage or student enrollment."
